

Keep in View FORGET ME NOT

$f(x)$ 2

Our Motivations

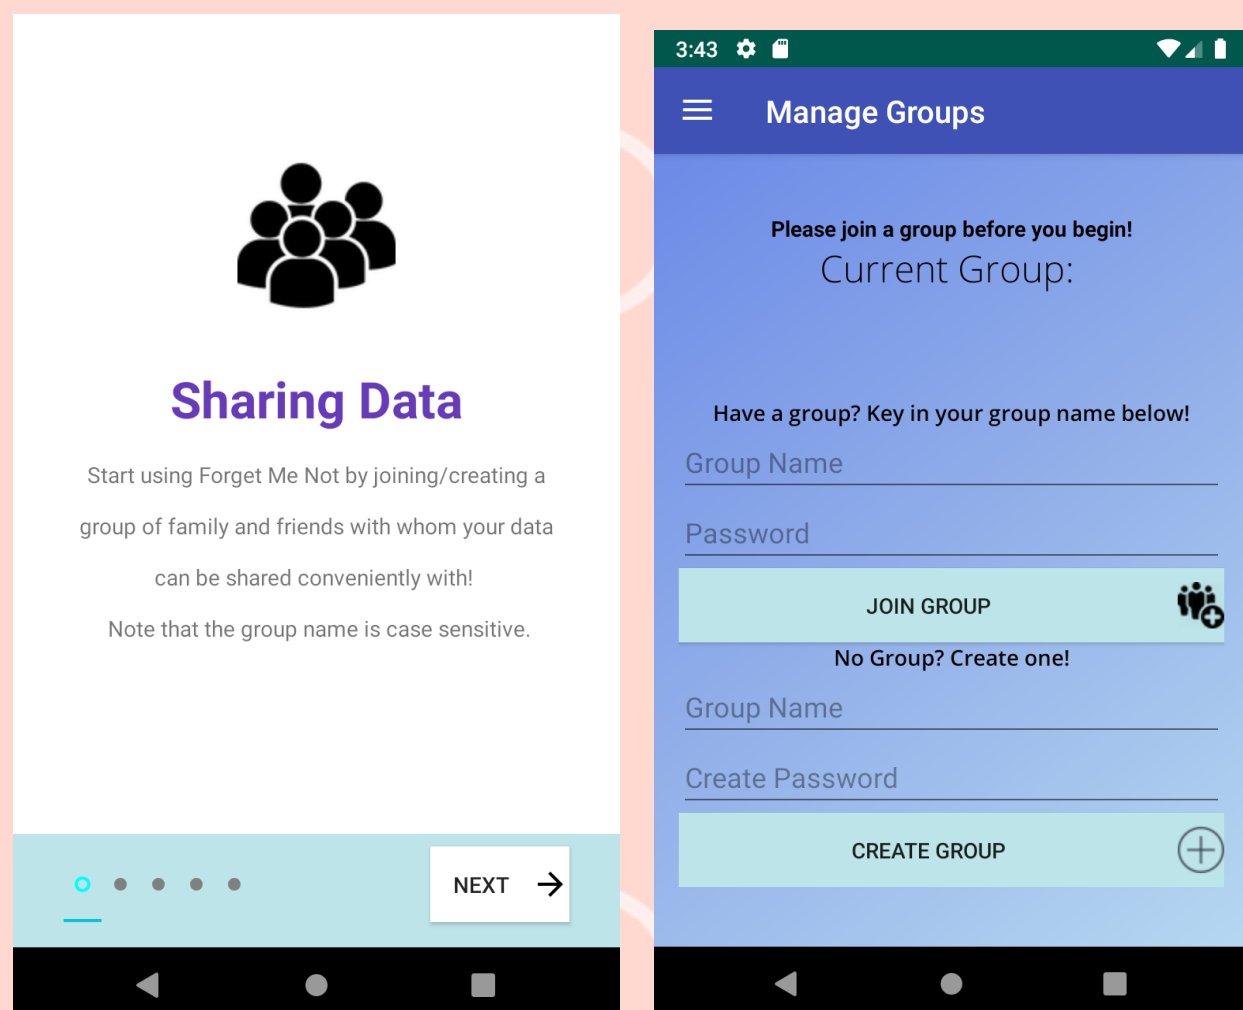

People are forgetful. Very often, we forget about the vegetables, milk, or meat shoved in the back of our fridge, and when we do remember them, they are no longer safe for consumption. Sometimes, we think we have flour in our pantry, but only when we start baking do we realise that we had run out of that item. At times, we find ourselves in the supermarket debating on whether to get a bottle of shampoo because we don't remember if we have any left. To overcome these shortcomings, we decided to create an Android Application, Forget Me Not.

Functions of our App

	Necessities	Non-essentials
Food	<ul style="list-style-type: none">Keep track of expiry date.Remind users to finish up the food near the expiry.Remind users to discard after expiryAutomatically add food to shopping list when expiry date is up, or when it has finished	<ul style="list-style-type: none">Keep track of expiry date.Remind user to finish up the food near the expiry.Remind user to discard after expiry
Non-food	<ul style="list-style-type: none">Keep track in My Inventory, add to My Shopping List when running out	

3 Features

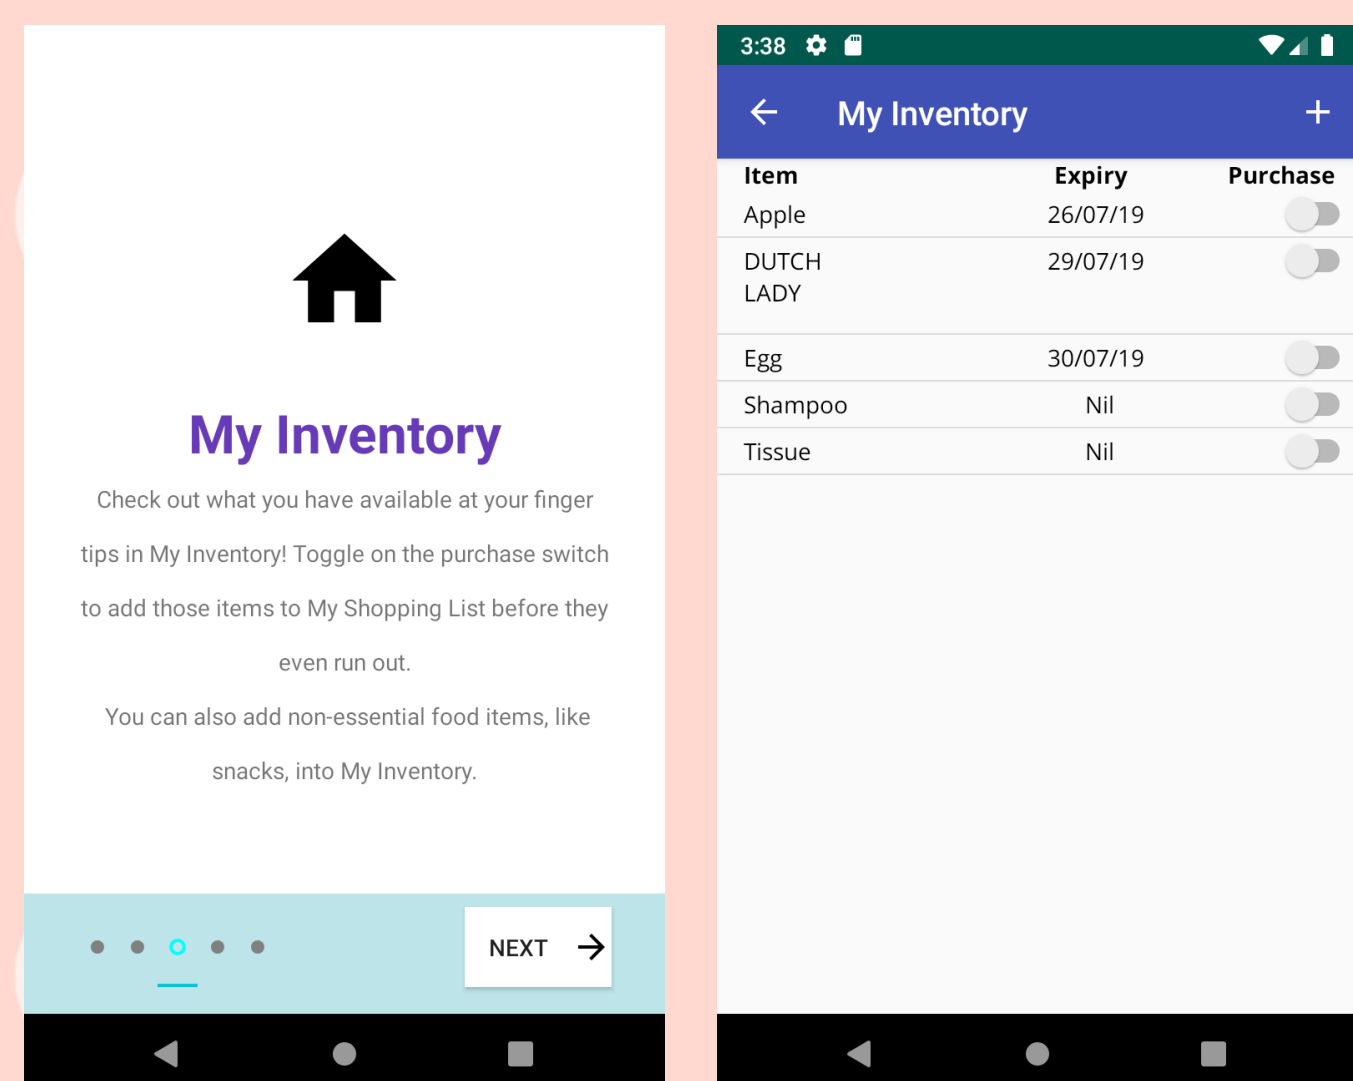

Easy & convenient sharing of data

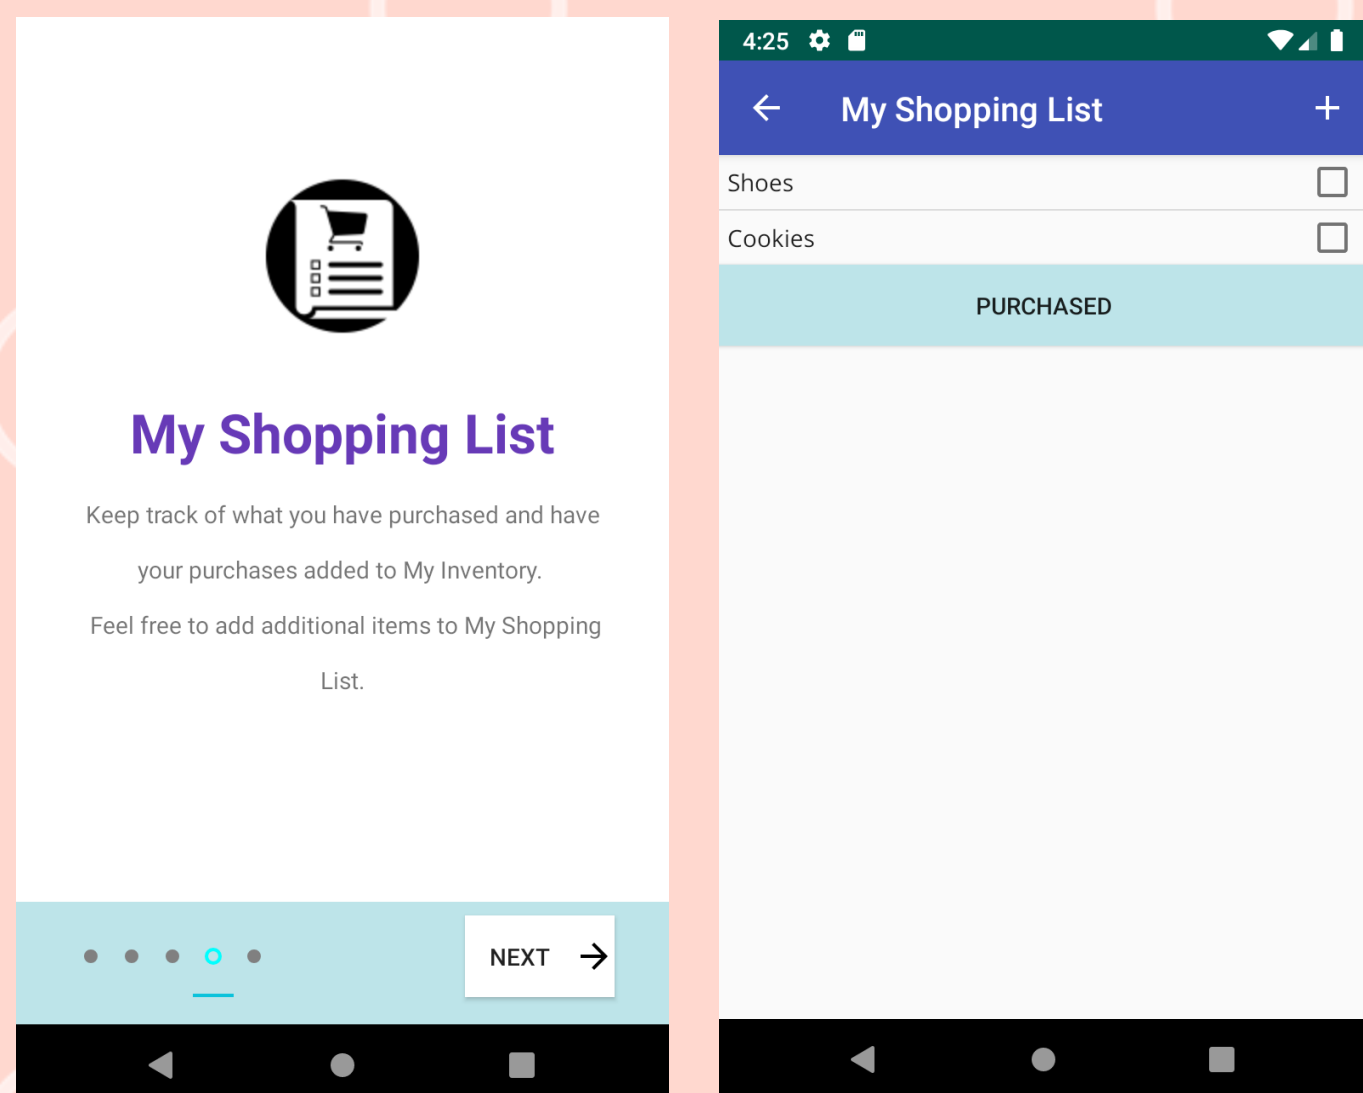

Keep track of necessities & enjoy an auto-updated shopping list

Check inventory of household items at your fingertips

Conveniently keep track of purchases & enjoy auto-updating of My Inventory

Get reminders for the expiry of both essential & non-essential food items
